Telegram @shayan_assistantBot

shayansafaisohi.github.io

AI specialist who builds working systems for an organisation with AI coding agents (Claude Code, Codex) and fixes the processes around them — from how teams use AI every day to the internal tools they run on. Looking for remote AI Enablement, AI Solutions or AI Operations roles.

EXPERIENCE

AI Specialist

Holding company · present

- Found staff using AI chat the wrong way — long, mixed conversations with no context — and taught teams how context windows and RAG work.
- Gave each unit its own assistant with fixed instructions and a knowledge base its office manager refreshes monthly, so answers stay correct as people move between units — faster replies, far fewer hallucinations.
- Built and shipped the internal systems below with AI coding agents (Claude Code, Codex), from requirements to deployment and automated tests.

CORE SKILLS

AI enablement

Claude Code, Codex, instruction design, RAG knowledge bases, context-window management, team training

Automation & AI

n8n workflows, LLM / AI agents, webhooks, REST APIs, Python scripting

Backend & real-time

Node.js, Fastify 5, Python / Django, WebSockets, LiveKit (WebRTC), ONNX Runtime

Frontend

TypeScript, React 19, Next.js 16, Tailwind CSS v4, shadcn/ui, Vite, PWA, RTL interfaces

Data, security & delivery

PostgreSQL, Supabase (RLS), Docker, Caddy, pnpm monorepos, Playwright, Vitest, Pytest

SELECTED PROJECTS

HamNeshin

AI · Real-time

Records Persian-language meetings, transcribes them, identifies who said what, and delivers a summary with action items.

- Real-time audio and video with the LiveKit (WebRTC) client and server SDKs.
- On-premise speaker diarization with ONNX Runtime — recordings never leave the organisation's infrastructure.

TypeScript · React 19 · Fastify 5 · LiveKit · ONNX · WebSockets

AdvertisingPanel

Workflow system

Internal tool that moves every ad campaign from brief to published banner through seven roles, each with its own view and approval step.

- Role-based access for supervisors, scenario writers, scriptwriters, banner designers and admins.
- No duplicate campaign IDs under concurrent submissions, thanks to database-level locking.
- Playwright tests drive five roles at once on desktop and mobile layouts.

Python · Django · PostgreSQL · Docker · Playwright

Qaf

LegalTech platform

Platform for a law practice: a client portal, an attorney dashboard and an admin panel sharing one codebase.

- pnpm monorepo — web app, panel and shared UI / logic packages versioned together.
- Row-level security in Supabase, verified by 44+ automated tests so clients only ever see their own files.

Next.js · TypeScript (strict) · Supabase RLS · shadcn/ui · Vitest

Refahi

PWA

Employee benefits portal where staff order and book services from their phone, with SMS sign-in and push notifications.

- SMS one-time-password login and server-sent Web Push notifications; installable and offline-capable.
- One-click Excel reports for the accounting team, generated from live data.

Next.js 16 · React 19 · Supabase SSR · Tailwind v4 · Web Push
